ASP

Duration: 3 days

Price: £2085 + vat
(for up to 2 delegates)

Prerequisites

Delegates attending this ASP training course must have a good understanding of Visual Basic Scripting and HTML

This ASP training course will set you up to create custom dynamic web enabled applications. ASP (Active Server Pages) is an open Web application framework that lets you combine server scripting with custom components to provide dynamic Web-enabled applications. ASP files allow you to activate your Web site using any combination of HTML, & either JavaScript or VBScript.

Objectives

This 3 day ASP training course provides clients with a good working knowledge of ASP. This will be achieved through a series of hands-on coding exercises. The first day is dedicated to a summary of VBScript. The second day and the morning of the third day is spent studying how to produce a database driven News web page with its administration HTML forms. The afternoon of the last day concludes with an introduction to VBScript objects.

Course Content

ASP Introduction

- Theory of database driven websites
- Difference between server side and client side code
- Creation of an ASP file

VBScript Summary

- Response.Write
- Server Side Includes
- Variables
- If and Select Conditions
- For loop
- Functions
- Sub Routines
- Client Side Data Validation

Overview of Access

- How to use a database in an ASP context
- Create an Access table

TRAINING

ASP (continued)

Duration: 3 days

Price: £2085 + vat
(for up to 2 delegates)

Prerequisites

Delegates attending this ASP training course must have a good understanding of Visual Basic Scripting and HTML

Database Driven News

- DSN less Connection String
- Recordset
- Using HTML Forms, VBScript and SQL to:
 - Display all the records
 - Add a new record
 - Delete a record
 - Amend an existing record
 - Search for records

Cookies

- Introduction to Cookies
- Create a Cookie
- Read a Cookie
- Read several Cookies

ASP Objects

- Request.ServerVariables
- Request.QueryString
- Response.Write
- Response.Redirect
- Buffering
- Global.asa
- Server.Execute method
- Server.Transfer method
- Server.HtmlEncode method
- Server.UrlEncode
