TRAINING

MySQL Database Administration

Duration: 2 days

Prerequisites

Administration of other databases is not required; however you should be familiar with MySQL at a basic level

Learn how to be a good Database Administrator with this comprehensive MySQL Database Administrator training Course.

Topics include set-up of your server, performance, and security. The course also covers replication, as well as administration issues concerning transactions and the MySQL table handlers.

Objectives

After this MySQL Database Administration training course, you will be in position to independently administer your MySQL database(s), identify potential drawbacks and avoid them.

You will know how to effectively secure your system, whether we are talking about:

- Backup
- Recovery
- Damage detection and repairing
- User management

You will be able to analyse your server set-up and its performance and to optimise them according to your specific needs.

Course Content

- MySQL Overview
- General DBA Tasks
- Database Structure
- User Management
- Backup & Recovery
- Security
- Damage Detection & Repairing
- MySQL Configuration
- Replication
- Transactions
