TRAINING

VB Script

Duration: 2 days

Prerequisites

The course assumes a working knowledge of HTML and some experience in general programming

Experience in programming VB is desirable but not essential

In this VB Script training course, You will learn about Microsoft's Visual Basic Scripting Edition which is a scaled-down version of Visual Basic. While it doesn't offer the functionality of Visual Basic, it does provide a powerful, easy-to-learn tool that can be used to add interaction to Web pages.

Objectives

After this VB Script training course, delegates will:

- Have a good understanding of VBScript syntax
- Be able to write client side VBScript
- Understand CSS and the Document Object Model
- Use simple server side VBScript to receive and send information to the user / server

Course Content

- Simple client side VBScript using built in objects (Dialog Boxes etc.)
- Short introduction to CSS and the Internet Explorer Document Object Model with reference to elements used in 1 above (forms in particular)
- Exercise: Using VBScript to manipulate the CSS properties and elements of the DOM
- Review/Q and A: VBScript language:
 - Variables
 - Data Types
 - Arrays
 - Loops
 - Decision making constructs
 - Syntax (dot notation)
 - Events
 - Methods
 - Properties
 - Objects
- Client side ActiveX using the Tabular Data Control
- Simple server side VBScript in ASP (Response, Request, Session and Application objects)
 - Acting on information recieved from the user
 - Returning information to the user
- Introduction to COM using ADO
 - Connection object
 - Recordset object
 - Simple SQL
 - Creating recordsets based on user input
 - Returning recordsets to the user
 - As HTML
