Developed by APMG, this Agile Business Analysis Practitioner Certification Course provides practising business analysts the correct skills and tools concerning the implementation of Agile approaches within their practice - providing high-valued solutions to stakeholder requirements.

Agile Business Analysis Certifications give candidates guidance on implementing Agile methods into their own working practice through encouraging a mixture of workshop/exercise tasks and lecture-based instruction - in order to ensure maximal knowledge acquisition and adherence to a stakeholder's requirements during complex practice. Whilst promoting enhanced financial and resource utilisation, this course will encourage business analysts to apply the set-Agile principles and framework within their practice, which is crucial when initiating and leading Agile projects and/or when analysing Agile business processes too. Understanding Agile from this perspective will help candidates when analysing, evaluating, and comprehending requirements of stakeholders - hence this course is significantly beneficial for businesses seeking function and performance increments. Agile Business Analysts are much sought-after due to their pivotal role in initiating financially viable and beneficial Agile projects - justifying the importance of this course for both individuals and businesses.

Undertaking this Agile Practitioner Course enables a Business Analyst to transform their knowledge into practice - diverting away from traditional practice to an Agile approach, whilst also enhancing a candidate's skill-set through encouraging them to contribute to post-project business processes concerning alternative business objectives and overall strategic mission planning instigations. The Agile approach's flexibility means that Agile Business Analysis principles can be applied regardless of the business/project size and the complexity of dysfunctional business processes, meaning that this certification is beneficial for a myriad of industries or multi-business free-lance business analysts.
