This updated 2017 CompTIA Project+ Certification is designed for individuals that wish to enhance their project management skill repertoire - mainly focused on, but not exclusive to, the IT industry. Comprehensively planned and managed projects have enhanced productivity and reduced dysfunctional resource-consuming practices, hence this training course is beneficial for businesses looking to achieve ambitious objectives within a pre-set budget. This CompTIA Project+ course enables candidates to acquire knowledge of project management life-cycles and appreciate what is expected of project manager in terms of initiating, planning, implementing, monitoring, finishing, maintaining documentation, and appraising the project's overall success - enhancing proficiency and self-efficacy of a project manager. This CompTIA Certification can act as a bridge between strongly developed IT skills and higher management positions - enabling candidates to maximise their business potential, due to knowing what processes occur on both sides of the management line/distinction within projects
