What is CompTIA Server+ Certification?

This CompTIA Server+ Training Course is designed to elevate a candidate's applicable knowledge of RAID, SCSI, Multiple CPUs, troubleshooting and disaster recovery. This sought-after CompTIA Server+ Certification demonstrates that an individual is capable of planning, securing, and maintaining a myriad of server equipment. The CompTIA Server+ covers in-depth advanced storage mechanisms, and business continuity strategies, making it a comprehensive certification that goes beyond alternative courses, and therefore makes it extremely beneficial for individuals looking to enhance their professional proficiency and employability. Covering on-trend technologies and server methods including virtualisation, data centres, and secure network storage solutions, this CompTIA Certification offers candidates with a comprehensive understanding of server architecture, administration, and fundamental management.

From an HR/business perspective, selecting a trustworthy candidate to manage a business' network, hardware, and a server is time-consuming and difficult, hence this course can help to develop internal technicians and server managers - with existing company knowledge and enhanced server competencies.
