

## What is Crystal Reports 2013 Advanced?

This updated Advanced [Crystal Reports](#) 2013 training course educates candidates on how to implement SQL query writing and geographic mapping skills within their report writing, in order to create highly complex and stakeholder/business specific business reports. This training course provides candidates with an elevated appreciation of the Crystal Reports Software, including how to utilise all of its specialised functions including complex data analysis, group and elemental list reports, subreports, cross-tabs, and content inclusion - enabling the development of comprehensive business reports. This Crystal reports course is very hands-on and focused on developing transferable skills that individuals can incorporate in their business writing skills from day 1 - enhancing professional competency and perceived management competencies, that could lead to increased work responsibility and/or a business promotion. The course is led by experienced Crystal Reports instructors, and consists of practical activities, allowing candidates to gain much hands on experience. The duration of the course is 2 days.

## What are the objectives of Crystal Reports 2013 Advanced training?

On completion of Crystal Reports 2013 Advanced training, candidates will be able to:

- Connect to data using drivers like ODBC and OLE DB
- Construct cross tab reports
- Summarise and conclude report data
- Use parameters in reports
- Work with arrays
- Construct charts
