What is Lean Awareness Training?

This introductory Lean training course enables delegates to understand the benefits of Lean for their organisation; the key Lean principles, tools and techniques and how to approach implementation.

Lean thinking has become a widely adopted improvement approach that can greatly simplify processes and improve performance in both manufacturing and service organisations.

Lean recognises that most of an organisation's processes are at best 40% value adding. Effectively applying Lean principles and tools can significantly improve the percentage of value added time; reduce process timescales; and reduce waste and the associated costs.

At the same time there will be an improvement in customer service and satisfaction levels.

We also provide in-company **Lean Awareness courses**. Call +44 (0)1273 622272 to discuss.

Lean Awareness Training

Course Objectives

This one day introductory Lean course uses a blend of theory and practical exercises. During this Lean Awareness training course delegates will develop an understanding of:
