

What is Microsoft Project Masterclass Training?

With this Microsoft Project Masterclass training course you can analyse your project information by using Gantt charts, graphs, tables and views and you can track how your project progresses, identifying what to do if it doesn't proceed to plan.

Using Microsoft Project, you can monitor and schedule your projects using resources such as people, equipment, time and money.

If you are new to project management you should also consider our 1-day [Introduction to Project Management course](#) - or something from our range of [PRINCE2 Training Courses](#).

As well as our scheduled courses in **Brighton, UK**, we provide private and in-company **MS Project courses**. If you'd like to discuss this further - or to book a course, just give us a call on +44 (0)1273 622272.

Course Objectives

On completion of this training course, you will:

- Understand the concepts of project planning using Microsoft Project
 - Know how to identify, organise and manage the tasks and resources required to complete a project under the constraints of time and cost to achieve a final project target.
-

1. Project Management

- Microsoft Project
- Understanding Project Management
- Microsoft Project terminology
- Starting Microsoft Project
