What is Oracle Database Administration Training?

Oracle Database Administration is a skill that has been growing in demand over recent years, despite the downturn in the global economy. This Oracle Database Administration training course builds on the SQL*Plus and PL/SQL skills from the perspective of a technician responsible for creating and administering physical and logical file structures in this powerful relational database product.

Who is Oracle Database Administration Training intended for?

A grounding in relational database concepts; familiarity with the use of graphical user interfaces. Some expertise with both SQL and PL/SQL in an Oracle environment is expected.

What are the objectives of Oracle Database Administration Training?

This Oracle Database Administration training course is intended for technical staff who are becoming responsible for creating and administering Oracle databases.
Development staff may also benefit from attending this Oracle Database Administration training course, to gain an overview of the work of a Database Administrator to aid in developing effective systems that will be based on Oracle.
