

What is the Six Sigma Black Belt Certification?

This project management qualification lasts for 10 days which will involve the [Six Sigma Yellow](#), [Green](#) and [Black Belts](#) combined. During the first 5 days of the training course, you will learn the [Yellow Belt](#) and [Green Belt](#) courses and preparation for the exams. The final 5 days of the training course involves learning the Black Belt Certification. The session will include the advanced DMAIC tool and will include exam preparation. Following this, you will be able to assign team member roles to suit their skills, demonstrate team leadership skills and have a good understanding of the DMAIC model.

Motorola invented Six Sigma training courses in the 1980's and it has since been used in many other companies. Six Sigma is used to improve techniques for businesses, with an emphasis on collecting and analysing data on business processes so as to locate where weaknesses are occurring and decide on the best way to reduce them. Black and Master Black Belts have the task of overseeing Six Sigma-related activities, while Yellow and Green Belts work with Black belts to help complete their work.

Six Sigma Black Belt Course Objectives
