Learn how to use one of the best CSS preprocessors to create a more logical, efficient and speedy CSS workflow with our brand new Sass Training course.

What is Sass Training?

Sass (**S**yntactically **A**wesome **S**tylesheets) is a fully CSS3-compatible preprocessor that adds power and flexibility. Sass training enables you to design your website more effectively. Candidates will learn to work the main components of Sass and will learn how to use Sass lists to create functions.

This one day introductory Sass training course will take you step-by-step through the basics, giving you the foundation skills to start using Sass.

What are the objectives of the Sass Training Course?

By the end of the Sass training course, you will be able to:

- Understand the different options for installing Sass
- Choose an output style for your stylesheets
- Understand Sass syntax
- Confidently use basic Sass featured such as variables and mixins
- Use Sass to simplify your media queries

What topics does Sass Training cover?

This training course will cover:

Variable workings
Nesting styles
Mixins
Conditional statements and loops in SassScript
List and maps
