Whether you know how to click the buttons but need help with the principles of good web design, or you are a newcomer to web design and want to learn the rules before you start to design, this is the web design training course for you.

Get the Basics Right

We've been running web design courses since 1999 - and the web has changes immeasurably since then.

Just now - mobile is the biggest thing to happen to web design in the last decade, and our new Responsive Web Design course is designed to bring experienced designers up to speed with the latest standards and design principles.

However - we also continue to update this ever-popular **2-day Introduction to Web Design course**. The basic principles of web design need to be covered before the bells and whistles - and this comprehensive 1-day course encourages web design beginners to think about their users, their site structure, colours, fonts and navigation elements *before* they start building and getting carried away with the latest technologies.

There's always something to be said for sitting down and planning things on paper before you start to design - our trainers are all highly experienced web designers working in the industry right now - so you can be sure everything you learn is at the leading edge of current web standards.

We also provide in-company **Web Design courses**. Call +44 (0)1273 622272 to discuss.

Course Objectives

This course will give delegates the skills to:

- Create basic web pages and sites
- Understand elements of design with regard to the web
- Get to grips with necessary functionality elements

This course can be run in-company anywhere in the world & we can tailor the content to focus on your requirements.
